DESIGN-BUILD FIRMS

- Out the door and off to the jobsite in five days or fewer
- Keeps projects on schedule
- Elevates offerings with spec-grade performance
- Value pricing

CONTRACTORS

- Ships in five days or fewer
- Installs right out of the box
- Almost tool-less installation
- Never need to remove the lens or LED board to wire or hang
- Comes pre-wired with quick connectors between sections

Quick-Line: High Quality. Low Cost. Quick Delivery.

**Easy to Layout, Easy to Order,
Easy to Install—Right Out of the Box**
No Need to Remove the LED Board or Lens*

Amerlux's *Quick-Line* is a pendant and recessed linear LED family that ensures tight budgets and quick-turnaround delivery timelines never get in the way of casting your project in its best, star-studded light.

Outfitted with a high-performance lens and direct/indirect lighting distribution options, *Quick-Line* offers high quality, quick delivery and value pricing in a single linear lighting product—right off the shelf and off to your job site within five business days.

The linear product family is specifically custom-made and designed to stiff-arm the challenges lighting designers, architects and design-build contractors commonly have with linear lighting.

Let's see how *Quick-Line* promises to make your life easier.

*Gurv GB recessed requires removal of Lens and LED board for connection.

The Easiest Installation Ever

Installing linear lighting with *Quick-Line* flows like an ad jingle: **Link it, latch it, cap it**—and voila!

It's that easy.

Sold in standard-sized middle-of-run segments, *Quick-Line* pieces connect with simple latches and alignment pins assure the runs stay straight. When you finish the run, just slap the end caps on either side.

Quick-Line fixtures ship with the lenses and LED boards already installed, eliminating jobsite assembly. In fact, you never have to open *Quick-Line* fixtures for any part of the installation, making it the easiest-to-install linear lighting product on the market.

And that's on purpose.

We know you have a lot of work. The sooner you finish one project, the sooner you start the next. With *Quick-Line*, lighting is something you quickly cross off your checklist.

Pick your top 3: high quality, quick delivery and easy installation. The answer is *Quick-Line*. Learn more at **(973) 310-7787**.

9 Reasons Why

You'll Love Quick-Line

Quick-Line, a linear LED pendant and recessed fixture, offers:

- Three aperture sizes—1.5", 2" and 4"—with direct and direct/indirect combo light distribution options.
- A no-hassle installation process that goes like an ad jingle: Link it, latch it cap it—that's it! No more having to remove the LED board to wire or install.
- 4-, 6-, and 8-foot lengths, with sections that easily clip together for longer-than-standard-size runs.
- Super-fast shipping, out the door and offer to your jobsite within five days, which keeps your projects moving quickly.
- A polished, modern look that drives any design scenario seamlessly.
- Quality construction, built from spec-grade extruded aluminum, ensuring architecturally straight lines of light.
- A high light output of 730 lumens per foot and 105 lumens per watt, plus 3000K to 3500K.
- Industry-best light block shields that automatically adjust when lenses shrink, preventing any direct view of the LED die.
- Easy maintenance thanks to the LED board being held in place with magnets, eliminating the need for tools when removing or replacing.

Pre-Wired Fixtures

Just as you never need to remove the LED board or lens to install, all sections are shipped pre-wired with your choice to control direct and indirect lighting separately, as well as emergency lighting circuits.

Each section in a run can accept power from the top or from the other sections in the run, granting great flexibility in designing and installing linear runs. With the internal wiring and LED elements preinstalled, you never need to open the fixture during installation.

Ships Within Five Days

Construction timelines are complicated. Many factors can hold up projects, including permitting, inclement weather and late deliveries.

You cannot do much about the first two, but the third is avoidable with *Quick-Line*.

While lighting deliveries can take several weeks or months for custom designs, *Quick-Line* ships within five days after receiving a clean PO to advance a new construction or retrofit project quickly.

Quick-Line is packed and stocked as individual fixtures, but job packaging (bulk, job-specific packaging) is also available for less jobsite waste. (Job packaging may require slightly longer shipping times).

Spec-Grade Materials

Quick-Line is an architectural spec-grade line fixture offered with the value and benefit of commodity-grade styled luminaires.

Constructed from extruded aluminum instead of steel, *Quick-Line* assures architecturally straight lines of light.

It's typical for long linear fixtures made of steel to bend where run sections join because the pins holding them in place can't bear the weight of the overall fixture. Consequently, contractors must go back and fix them before completing a project.

Using a linear fixture like *Quick-Line* that doesn't bend eliminates an item from your punch list so that you can finish the job faster.

Competitive Price Points

Quick-Line is offered in standard sizes instead of custom options, which dramatically reduces its manufacturing costs and provides savings to you.

This linear lighting solution has the same prominent level of engineering baked into its design as every other Amerlux product, ensuring you're never sacrificing quality for cost.

Simple Order Process

Ordering *Quick-Line* for your projects couldn't be easier—or quicker:

1. Count how many middle-of-run pieces you need.
2. Get end caps.
3. Choose your power supply and suspension kit options.

It's that simple.

The products you choose will ship within five days after you complete your order.

Standard Sizing

There are no made-to-measure headaches with *Quick-Line*. It's only sold as linkable middle-of-run pieces with separate end caps in standard lengths of 4-feet, 6-feet and 8-feet, simplifying your design and installation process.

When other lighting products arrive at a jobsite, you must sort through the assorted items delivered to determine the proper location for each run length, making it easy for the wrong pieces to end up in the wrong room or floor, causing delays.

With *Quick-Line*, all the pieces are the same. There's no confusion.

Rapid ROI

Quick-Line LEDs deliver outstanding lighting quality for more than 50,000 hours without depreciation, minimizing maintenance costs, maximizing efficiency and providing long-lasting energy savings—a trio your customers will appreciate for years to come.

Ready to Make Linear Lighting the Easiest Part of Your Projects?

High quality, low cost, quick delivery. You used to have to pick two of the three, requiring you to balance time, speed and quality when selecting building materials.

Not anymore.

Now, there's a new option: *Quick-Line*.

From high-end commercial buildings to average-Joe office spaces, *Quick-Line* provides exceptional performance, easy installation, fast delivery and dynamic, turn-your-head styling that will make any application look like a million bucks—without you having to spend it.

To learn more about *Quick-Line* or begin ordering it today, call (973) 310-7787 or visit **Amerlux.com**.

Featured Products
