

Amerlux testimonial from Quentin Thomas

The most important component of Amerlux is that everyone is accessible. You can call the CEO or any of the other leaders and managers and talk to them on the phone. They answer emails or text messages in minutes.

Lighting is becoming a technology business and many of us in the industry are learning the technology for the first time. The ability to get direct answers from the manufacturer is a game-changer.

On top of that, Amerlux's products are very high quality. In the millions and millions of dollars we've specified from Amerlux over the years, we have never had a problem with a product not being made well or any kind of aftermarket issue. I can't say the same about other manufactures we've worked with. Amerlux stands behind their products and they are dogged about not taking manufacturing shortcuts. If they need to do something to meet their price point, they find a way to engineer the product even better, so it uses less materials or a more efficient manufacturing process.

Large projects we've used Amerlux lighting in include Conde Nast's headquarters in One World Trade Center, Balyasny Asset Management's New York and Chicago offices, and the Devon Energy Center in Oklahoma City.

- Quentin Thomas, president of Quentin Thomas Associates

Quentin Thomas Associates is an award-winning lighting design firm based in Little Neck, New York. The firm has completed nearly 1,000 flagship projects in major markets all over the world.
